

Render template

- Trả về nội dung từ template
- Biến context
- Cú pháp điều khiển for, if

Trả về nội dung từ template

```
#app/views.py
from django.shortcuts import render

def index(request):
    return request(request, 'index.html')
```

```
<!--app/templates/index.html-->
<meta charset="UTF-8">
<html>
    <body>Home page</body>
</html>
```

Biến context

```
#app/views.py
from django.shortcuts import render
def hello(request):
    name = request.GET.get('name', '')
    context = {'name': name}
    return render(request, 'hello.html', context)
```

```
<!--app/templates/hello.html-->
<meta charset="UTF-8">
<html>
    <body>Hello {{name}}</body>
</html>
```

Cấu trúc for

```
#app/views.py
def index(request):
    productList = [{'code': 'IPX', 'name': 'IPhone X'},
                   {'code': 'IP8', 'name': 'IPhone 8'}]
    context = {'productList': productList}
    return render(request, 'index.html', context)
```

```
<!--app/templates/index.html-->
<ul>
    {% for p in productList %}
        <li>{{p.name}}</li>
    {% endfor %}
</ul>
```

Cấu trúc if

```
#app/views.py
def index(request):
    productList = []
    context = {'productList': productList}
    return render(request, 'index.html', context)
```

```
<!--app/templates/index.html-->
{% if not productList %}
    <label>Không có sản phẩm nào</label>
{% endif %}
```
